

FEEDING THE GROWING WORLD - TOGETHER

Our family of brands have been manufacturing food processing equipment for over 60 years. We have hundreds of employees in 8 global locations dedicated to supporting a wide range of food industries and the biggest brands in the world.

ABOUT VANMARK

Vanmark is a leading manufacturer of industrial potato and produce processing equipment, working with our customers to make safe, high quality food we know and love to eat. For over 60 years we have been designing and manufacturing top-quality, easy-to-use equipment that optimizes storage, conveying, washing, peeling and cutting processes.

ABOUT PFI

PFI manufactures a wide variety of sanitary conveying and bulk material handling equipment for food processing operations. Every solution is designed to sanitary regulations and configured to seamlessly integrate with existing systems. With over 60 years of experience, we always have our customers' best interests at heart and ensure dependable success before, during, and after installation.

Seamlessly integrate Vanmark's peelers and hydrocutting machines with sanitary belt, bucket, horizontal motion, and vibratory conveyors from PFI.

Together we provide more complete solutions to support the core processes on your food processing line.

WHY VANMARK + PFI?

We work with the largest brands in the world to make safe, high-quality food we love to eat. Now, we capitalize on our shared expertise and history in the food processing industry.

LOCAL SUPPORT

We can manufacture and support core equipment for both companies in our Bengaluru facility.

INTEGRATED SOLUTIONS

Support core washing, peeling, and hydrocutting processes with sanitary conveying integrated seamlessly.

SANITARY & MAINTENANCE-FRIENDLY

Equipment is designed for optimal sanitation and food-safety with minimal moving parts and quick maintenance.

CUSTOMER DEDICATION

We're dedicated to supporting you before, during, and after a project. Our decades of experience and global footprint help us find the best solution.

FOOD APPLICATIONS

Our durable, easy-to-use, and high performing equipment suits a variety of food applications.

PEELER/SCRUBBER/WASHERS

Our abrasive continuous peeling machines provide high-yield, high-volume washing and peeling of potatoes, carrots, cucumbers, and other produce – multitasking to save your operation time and dollars on additional machines.

With a variety of machines, flow rate capabilities, options, and accessories – we ensure every solution is built specifically for you.

PEELER WATER SAVINGS SOLUTIONS

Impact your peeler water usage and treatment with our Waste Separating Auger or Water Reclamation System. Both solutions filter and collect solid waste out of our abrasive peelers' process water, and either run the filtered water into your drain system or recirculate it back into the peeler.

HYDROCUTTING SYSTEMS

Our integrated hydrocutting systems use innovative technology to provide precise, high-volume cutting to food processors all over the world – from well-known French fry manufacturers to pickles, carrots sticks, and other fruit and vegetable applications. Our machines are built durably with minimal moving parts and consumables to significantly reduce downtime and total cost of ownership.

STORAGE & TRANSFERRING

Get effective in-process product storage and transferring from heavy-duty, low maintenance stainless steel machines. Equipment is durable, virtually maintenance free, and doesn't sacrifice product handling.

From hydrolifts to inspection and even feeder conveyors and more, we custom fit equipment to your exact process, production rate, and footprint.

SANITARY CONVEYING & PRODUCT HANDLING

PFI food-grade conveyors and handling systems connect the key processes of your processing line – including washing, peeling, and cutting on Vanmark machines.

Every solution is custom configured to your application and footprint and designed for quick and thorough sanitation and maintenance.

VIBRATORY CONVEYORS & FEEDERS

Vibratory solutions give food processors the ultimate value with safe and sanitary long-life, low-maintenance operation, high volume conveying, and energy efficiency.

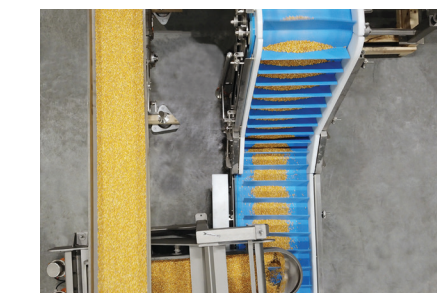

Whether you're moving, feeding, screening, dewatering, laning, grading, or spreading, vibratory conveyors are gentle on your food product, minimizing degradation and loss.

BELT CONVEYORS

Belt conveyors have been the standard, modular solutions to connect your processing line and move your product. Customize each machine and integrate them together to fit your layout and application.

Choose from horizontal, curved, incline/decline, Z-shape and more configurations.

BUCKET ELEVATORS & INCLINE CONVEYORS

Lift product to the key processes on your food processing line, like mix/blend systems, scales and packaging or a platform, in a minimal footprint.

Elevate gently and without loss using incline belt conveyors, lift systems, and bucket elevators.

HORIZONTAL MOTION CONVEYORS

Horizontal motion conveyors provide the ultimate gentle handling, product integrity, and food safety for food processing lines.

The PURmotion builds on horizontal motion technology with patent-pending feed rate and instant reversibility control – giving food processors consistent uptime and flow along with gentle handling, flexibility, and durability.
